

USB-H70-1A2.0

7-Port high speed Active desktop Hub

The easy way to add extra USB ports.

Introducing the new 7-Port active USB2.0 Hub from Dynamode with some unique features to help protect your USB investment.

The **USB-H70-1A2.0** is a stylish, 7-Port USB2.0 design which allows both active and passive USB peripherals to be connected at up to 480Mbps transfer rates. Ideal for desktop and server users who wish to add USB port density to their desktop, server or other multimedia platforms.

Fully backward compatible with USB1.1, the **USB-H70-1A2.0** also features 'over-current' protection on each USB port which means any power surges on the USB port (normally this happens when a USB device is plugged into the USB port) are dissipated before they travel to the attached Computer, with the possibility of causing expensive hardware damage.

Supplied with mains power adapter means **the USB-H70-1A2.0** is an active hub and will allow higher voltages to travel down the attached USB cable to power your USB peripheral, such as printer or scanner, of course passive USB devices are supported as standard.

Coming complete with vertical stand with the option of placing horizontally for your application, **the USB-H70-1A2.0** is fully Plug n' Play with all Operating Systems and needs no drivers to be installed.

Further product details available from www.dynamode.com
